

INTERLEUKIN-1	INTERLEUKIN-6	INTERLEUKIN-17
Macrophages, Fibroblasts, endothelial cells & few epithelial cells	Macrophages, Fibroblasts, endothelial cells & few epithelial cells	T Lymphocytes
Stimulates expression of endothelial adhesion molecules Emigration of neutrophils & macrophages Secretion of other cytokines Fever	Systemic Response: Production of Acute Phase Reactants from liver Particularly important in inducing B-Cells to differentiate into antibody producing Cells (Plasma Cells)	Recruitment of neutrophils and monocytes Secretion of other cytokines like IL-6, G-CSF, GM-CSF, IL-1β, TNF-α, chemokines
