Script 1

Friday, April 28, 2023 9:52 PM

- 5 main classes, 2 are controllers
- 2 different scenes
- Start at main
- Enter info
- Submit button, check phone number, technically all needed
- Pass to get numb info, compile all necessary info
- Pass number to get possible combos class
- All combos generated and then checked against our database (dictionary)
- If string combo has a substring of a word in the dictionaries used, then re-enters the number into the string around the actual word
- All these compiled into a ArrayList string
- Passed back to get numb info
- If system admin, all combos written to folder
- Uses the additional info to pick best combo
- Displayed on last scene by passing to its scene controller
